

The NOBLE Registry – An International Collaboration to Develop iPSMA SPECT Imaging for Prostate Cancer

BRUSSELS, Belgium and MELBOURNE, Australia, 19th of April 2021 – The Oncidium foundation, a non-profit organisation created to promote and support the development of radiopharmaceuticals for better patient access, and Telix Pharmaceuticals Limited ('Telix'), a radiopharmaceutical company developing diagnostic and therapeutic products ('theranostics') using Molecularly Targeted Radiation (MTR), are pleased to announce the launch of the NOBLE Registry, an international clinical collaboration for the development of ^{99m}Tc-iPSMA SPECT imaging for prostate cancer, and the dosing of the first patient at the University College Hospital, Ibadan, Nigeria.

Prostate cancer is the second most frequent cancer diagnosis in men and the fifth leading cause of cancer death worldwide¹. Early detection can significantly reduce the mortality rate and in recent years much attention has focused on PSMA² as a target for imaging and therapy using radionuclides for prostate cancer.

PSMA positron emission tomography (PSMA PET) is an emerging standard of care in prostate cancer imaging.³ Unfortunately, globally, not every patient will have access to a PSMA PET scan when indicated. The NOBLE (Nobody Left Behind) Registry aims to demonstrate that PSMA single photon emission computed tomography (PSMA SPECT), a diagnostic imaging technology widely available in healthcare facilities throughout the world,⁴ is a cost-effective and viable alternative. Enhancing global availability and access to ^{99m}Tc-iPSMA SPECT imaging has the potential to provide accurate diagnosis and staging to patients with prostate cancer regardless of where they reside.

The NOBLE Registry Committee, made up of globally recognized investigators at eight sites worldwide,⁵ aims to deliver and publish real-world evidence and clinical practice guidelines related to SPECT imaging and prostate cancer.

"The advancement of PSMA directed diagnostics and therapeutics in prostate cancer is helping to extend life and improve treatment outcomes in men with prostate cancer," said **Dr. Batool Albalooshi**, Chair of the NOBLE Registry Committee. *"However, millions of men do not have access to PET imaging. For this reason, it is our aspiration to develop a powerful, affordable, and widely available alternative imaging tool by using iPSMA SPECT technology."*

"Introducing PSMA has been difficult and exciting for the team at Ibadan. When I think of the opportunities for prostate cancer research and management without PET, I am motivated to get past the challenges. I look forward to a better future, with nobody left behind," said **Dr. Akintunde Orunmuyi**, Investigator at the University College Hospital, Ibadan, Nigeria, where the first patient is being dosed.

The NOBLE Registry has been initiated and is co-supported by the Oncidium foundation and Telix Pharmaceuticals. *"We aim to enable patients with prostate cancer, regardless of origin, technology access or financial situation, to access PSMA SPECT imaging for accurate diagnosis and treatment planning,"* said **Rebecca Lo bue**, General Manager of the Oncidium foundation.

⁴ In 2020 there were an estimated 25,500 SPECT and 6,700 PET cameras installed worldwide (Source: MEDDraysintell).

⁵ Australia, Egypt, India, Mexico, Nigeria, South Africa, Turkey, United Arab Emirates.

We are honoured to support the launch of the NOBLE Registry, which represents the very essence of our belief that every patient deserves access to the benefits of nuclear medicine. We wish to thank the Oncidium foundation for their support and partnership, as well as the expert global clinical leadership team led by Dr. Albaloooshi. Above all, we are grateful to the patients that will make this registry study possible and, in doing so, help to deliver an important milestone toward improving access to this important technology.” said **Dr. Christian Behrenbruch**, Chief Executive Officer of Telix Pharmaceuticals.

About the Oncidium foundation

The Oncidium foundation was created in 2011 by Dr. Richard Zimmermann. The foundation's priorities include promoting awareness about radiotherapeutics among patients and physicians, investing in research and scholarships, supporting, and financing the development of new radiopharmaceuticals for therapy, supporting clinical best practice, and improving access to patients.

About Telix Pharmaceuticals Limited

Telix is a clinical-stage radiopharmaceutical company focused on the development of diagnostic and therapeutic products using Molecularly Targeted Radiation (MTR). Telix is headquartered in Melbourne, Australia with international operations in Belgium, Japan, and the United States. Telix is developing a portfolio of clinical-stage products that address significant unmet medical needs in oncology and rare diseases. Telix is listed on the Australian Securities Exchange (ASX: TLX). For more information visit www.telixpharma.com and follow Telix on Twitter @TelixPharma and [LinkedIn](#).

None of Telix's products have received a marketing authorisation in any jurisdiction.
