

## Development Manager in Nuclear Medicine/Radiotheranostics field

*If the terms radiotheranostics and nuclear medicine ring a bell, and you feel like...*

- ... giving a purpose and meaning to your work
- ... striving for adequate cancer care access regardless of origin and financial situation
- ... endeavoring to support existing and upcoming radiopharmaceuticals in the oncology field

*...You might just be the one who we are looking for!*

Become a leading actor in the Oncidium foundation's ambitious expansion plan by:

- Enhancing Patients Access
- Accelerating Clinical Developments
- Improving production capacities
- Supporting Early-Stage Developments
- Increasing Partnerships

### Who is Oncidium foundation?

The **#Oncidiumfoundation** is a **#non-profit** and **#public-benefit** organization that aims to support and accelerate the development of **#radiotheranostics** for **#cancercare** with the objective of improving **#patientaccess** **#worldwide**. Radiotheranostics represent an innovative technology in **#nuclearmedicine**, using both a **#diagnostic** and **#therapy** tool, to detect and treat the same disease. Administered orally or by injection, radiotheranostics could represent a viable option and potentially be lifesaving and enhancing for people living with cancer. [Learn more.](#)

There is still a lot to be done to **#raiseawareness** among doctors, oncologists, patients and the general public about the functioning and benefits of this new diagnostic/therapeutic approach and thus, to **#enhanceavailability** globally. **You are interested, cause-driven, and hands-on?**

**Make this quest yours by joining our team and give your career a new meaning** 

### How will you make an impact?

- Identify opportunities and implement projects around radiotheranostics for cancer care that can help reduce costs and facilitate global access
- Reach and interact with a diverse audience to inform and educate on radiotheranostics (conferences, interviews, all kinds of visibility)
- Attend and participate to trade shows, presentation at conferences, partners meetings etc.
- Grow and acquire market intelligence, products, and partners knowledge within different regions
- Identify, analyze, and suggest projects around the development of radiotheranostics
- Reach and interact easily with experts in the field regarding the technical aspects
- Increase and manage the foundation's network of nuclear experts and practitioners
- Find and manage grants/sponsors/subsidies with partners
- Coordinate the foundation's Scientific Advisory Board of international experts

## The perfect match? 🎯

### You have:

- ✓ A master's degree in the medical field, chemistry/physics, or engineering
- ✓ Knowledge and interest in Nuclear Medicine and Oncology
- ✓ A minimum 5 years' experience in a position involving the pharmaceutical field or cancer care
- ✓ Excellent communication skills in English (oral, spoken and written)

### And you are:

- ✓ An outgoing person with excellent interpersonal communication skills to build and maintain successful relationships with the foundation's community
- ✓ A team player, able to create relationships at all levels, but also to work autonomously according to priorities and in a structured manner
- ✓ Ready and flexible to travel
- ✓ Based in Belgium or working in freelance

## What do we offer? 🇧🇪

- An exciting opportunity to become a key player for the foundation's deployment at a national and international level
- An active role and impact on the foundation's future directions and evolution
- A full-time schedule in a hybrid working environment
- An open-ended contract to invest and serve our mission with equally passionate colleagues
- A mission beyond borders with a requirement to travel > 30% of your time (Headquarters located in Belgium)
- A competitive salary package

## Looking forward to meeting you! ✨
